WDV-130B Specifications

Furnish and install louver as hereinafter specified where shown on plans or as described in schedules. Louver shall be stationary type with vertical rain resistant style blades positioned on approximately 1.50" centers within 5.1" deep frame. Louver frame material to be .081" thick 6063-T5 extruded aluminum, and blade materials to be .063" thick 6063-T5 extruded aluminum. Louver shall have a design wind load of +/-150 psf. Louver shall have a minimum free area of 7.67 sq. ft. based on the standard 48"w x 48"h test specimen. Louver shall have a maximum static pressure drop of 0.15" (exhaust) & 0.18" (intake) water gage based on 1000 FPM free area intake velocity. Louver shall carry Class A water penetration classifications based on a ventilation air core velocity of 984 FPM at a rainfall rate of 3" per hour and a 29 mph simulated wind velocity and ventilation air core velocity of 984 FPM at a rainfall rate of 8" per hour and a 50 mph simulated wind velocity.
